Fuse Prop by escaperoomshop.it ©2023

Power supply: 12V 2A

Relay: NC clean contact (negative common)

Wiring

- RED band - 12V dc power supply
- YELLOW band - power in
- BLUE band - power out (maglock)

How to set the prop

- Place the fuses in the desired order
- Swipe a magnet on the spot marked in the figure
- Wait for the LEDs to light up in sequence

The fuses contain a resistor. Correct operation can be checked by measuring the value with a multimeter by setting the scale to 20K Ω (The values read on the multimeter will be approximate)

>>>>

- BLACK 0 Ω (no resistor, just a wire)
- GREEN 1,0 K Ω
- RED 2,2 K Ω
- BLUE 4,7 K Ω
- YELLOW 10 K Ω
